

## **Kindergarten Art class**

This Art class is designed for the emerging young student to explore and experience different ways artists make marks, use art tools, combine mediums in one piece of art work, and feel while creating art.

### **Enduring Understanding One: In the process of creating art, artists transform their ideas using found items as well as art tools**

- Why do artists find items that could be transformed into something else that has meaning?
- How do artists create artwork from combining different mediums?
- How do artists get their ideas from their mind onto paper?
- When do artists create art?

### **Enduring Understanding Two: Artists no matter how young or old are communicating their ideas and understanding of the world around them in their artwork**

- If we told a story, could we as artists draw what was happening in the story?
- If we change our minds, does the meaning of the art change to?
- What do I want to say about my artwork?
- How are we going to listen to each other talk about their artwork?

### **Enduring Understanding Three: The Arts include drawing and painting, music, dance, play acting, writing, and anything we do that requires creative thinking**

- How do we know when what we are doing is making us think creatively?
- Can we combine several arts together in the same project?
- Who is our audience when we create projects that are for people?
- How does making art make us feel?
